Transmitters for mounting in sensor head

SITRANS TH300 (Universal, HART)

Overview

"HART" to beat - the universal SITRANS TH300 transmitter

- Two-wire devices for 4 to 20 mA. HART
- Mounting in the connection head of the temperature sensor
- Universal input for virtually any type of temperature sensor
- Configurable over HART

Benefits

- · Compact design
- Flexible mounting and center hole allow you to select your preferred type of installation
- Electrically isolated
- Test sockets for multimeters
- Diagnostics LED (green/red)
- Sensor monitoring open circuits and short-circuits
- · Self-monitoring
- · Configuration status stored in EEPROM
- SIL2 (with Order code C20), SIL2/3 (with C23)
- Expanded diagnostic functions, such as slave pointer, operating hours counter, etc.
- Special characteristic
- Electromagnetic compatibility to EN 61326 and NE21

Application

SITRANS TH300 transmitters can be used in all industrial sectors. Due to their compact size they can be installed in the connection head type B (DIN 43729) or larger. The following sensors/signal sources can be connected over their universal input module:

- Resistance thermometers (2, 3 or 4-wire system)
- Thermocouples
- Resistance-based sensors and DC voltage sources

The output signal is a direct current from 4 to 20 mA in accordance with the sensor characteristic, superimposed by the digital HART signal.

Transmitters of the "intrinsically safe" type of protection can be installed within potentially explosive atmospheres. The devices comply with the Directive 2014/34/EU (ATEX), as well as FM and CSA regulations.

Function

The SITRANS TH300 is configured over HART. This can be done using a handheld communicator or even more conveniently with a HART modem and the SIMATIC PDM parameterization software. The configuration data are then permanently stored in the non-volatile memory (EEPROM).

Once the sensors and power supply have been correctly connected, the transmitter outputs a temperature-linear output signal and the diagnostics LED displays a green light. In the case of a sensor short-circuit, the LED flashes red, an internal device fault is indicated by a steady red light.

The test socket can be used to connect an ammeter at any time for monitoring purposes and plausibility checks. The output current can be read without any interruption, or even without opening the current loop.

Transmitters for mounting in sensor head

 $^{^{1)}}$ The digital accuracy in the range 100 to 300 °C (212 to 572 °F) is 3 °C (5.4 °F).

mV sensor

Input	Measuring range	Min. mea- sured span	Digital accuracy
	mV	mV	μ V
mV sensor	-10 +70	2	40
mV sensor	-100 +1100	20	400

The digital accuracy is the accuracy after the analog/digital conversion including linearization and calculation of the measured value.

An additional error is generated in the output current 4 to 20 mA as a result of the digital/analog conversion of 0.025 % of the set span (digital-analog error).

The total error under reference conditions at the analog output is the sum from the digital error and the digital-analog error (poss. with the addition of cold junction errors in the case of thermocouple measurements).

 $^{^{2)}}$ The digital accuracy in the range 1750 to 2300 (3182 to 4172 °F) is 2 °C (3.6 °F).

in plain text Special differing customer-specific programming, specify in plain text Fail-safe value 3.6 mA (instead of 22,8 mA) Cable extension Transmitter with installed cable extension 150 mm (5.91 inch),	With TC: CJC external (Pt100, 3-wire)	U41
ming, specify in plain text Fail-safe value 3.6 mA (instead of 22,8 mA) Cable extension Transmitter with installed cable extension 150 mm (5.91 inch),		Y50
Cable extension Transmitter with installed cable extension 150 mm (5.91 inch),		Y09 ⁵⁾
Transmitter with installed cable extension 150 mm (5.91 inch),	Fail-safe value 3.6 mA (instead of 22,8 mA)	U36 ²⁾
	Transmitter with installed cable extension 150 mm (5.91 inch),	W01

Accessories	Article No.
Further accessories for assembly, connection	
and transmitter configuration, see page 2/238.	
HART modem	
With USB connection	7MF4997-1DB
SIMATIC PDM operating software	See Section 8
DIN rail adapters for head transmitters	7NG3092-8KA
(Quantity delivered: 5 units)	
Connecting cable	7NG3092-8KC
4-wire, 150 mm, for sensor connections when using head transmitters in the high hinged cover (set with 5 units)	

- 1) For customer-specific programming for RTD and TC, the start value and the end value of the required measuring span must be specified here.
- 2) For this selection, Y01 or Y09 must also be selected.
- 3) For this selection, Y01 must also be selected.
- $^{\rm 4)}$ Internal cold junction compensation is selected as the default for TC.
- $^{5)}\,$ For customer-specific programming, for example mV and ohm, the start value and the end value of the required measuring span and the unit must be entered here.

Supply units see Chapter "Supplementary Components".

Ordering example 1:

7NG3212-0NN00-Z Y01+Y17+U03

Y01: -10 ... +100 °C Y17: TICA123

Ordering example 2:

7NG3212-0NN00-Z Y01+Y23+U25

Y01: -10 ... +100 °C Y23: TICA1234HEAT

Factory setting:

- Pt100 (IEC 751) with 3-wire circuit
- Measuring range: 0 ... 100 °C (32 ... 212 °F)
 Fault current: 22.8 mA
- Sensor offset: 0 °C (0 °F)
- Damping 0.0 s
